STEP 1: Empirical Network Data Assembly
Street Network (GeoBase, QGIS)
GPS trajectories (85th percentile speeds)
Regression-based ADT estimation
STEP 2: Infrastructure Validation and Refinement
Satellite imagery validation (Google Maps)
Correction of critical segments
Integration of infrastructure attributes
STEP 3: Automated LTS Classification
Python-based rule application
Montreal-adapted LTS
Segment-level LTS assignment
Network-wide LTS Map
Complete, Consistent, Reproducible
