1 INPUT DATA

Station demand
(OD flows)

LTS network
(LTS 1-4)

Context layers
(optional)

2 PROCESSING & LTS MODELING

Network cleaning

LTS assignment
(link-level)

Impedance & cost
computation

3 MULTI-OBJECTIVE OPTIMIZATION (NSGA-II)

Decision variables
(stations, links)

Multi-objective
optimization

Pareto-efficient
solutions

4 OUTPUTS & DECISION SUPPORT

Maps
(stations, coverage,
network)

KPIs
(coverage, cost,
equity, etc.)

Scenario comparison
(Pareto front)

Reports & exports
(tables, GIS files,
city-ready reports)

Persistent Analytical Back-end

Database (PostgreSQL + PostGIS) • Scenario storage • Results & logs
